History of TSG(Toyo-Sasaki Glass)

Toyo Glass Co., Ltd.

●1878

Founder Magoichi Shimada joined Shinagawa Glassworks, established by the new Meiji government as an effort to pioneer Japan's domestic glassware industry. Shimada studied under British craftsman James Speed to learn the latest European mixing and production techniques. He later began to teach his knowledge and helped spreading the art of European glassmaking across the country.

●1909

Shimada established a new factory in Ebie, Osaka, incorporating the latest glassmaking technologies. Reputed to be as good as "the German one", the furnace he created was a particular success.

Shimada later acquired patent on his furnace design.

●1978

Toyo Glass introduced the TBM-18 machine to produce tumblers by blowing into the glass with minimal touching to the mold. The machine was able to produce glassware of very high grade and beautiful texture.

Sasaki Glass Co., Ltd.

●1902

Sōjirō Sasaki created his own glass shop in Kanda, Tokyo. He built his business around wholesaling oil lamps, a major product at the dawn of Japan's domestic glass industry. In the following year, Sasaki's glass shop began to export lamps to Hawaii, China, and Southeast Asia. The company also expanded its sales channels and created a nationwide wholesale network in Japan.

●1929

Sasaki Glass invented a special ink for printing glassware which expanded its capability of decoration for glassware.

●1967

HS series made its debut as Japan's first commercialized glass-rim toughened glassware brand. The safety, quality, and value it provides have made HS the top brand in the hospitality and foodservice industries.

TOYO-SASAKI GLASS Co., Ltd.

●2002

In April, the Houseware Division of Toyo Glass and Sasaki Glass merged and formed Toyo-Sasaki Glass. In October, a brand new production facility was completed in Yachiyo. Located in Chiba prefecture near Tokyo, the new site combined the latest automation equipment from both companies and allowed both hand-made and machine-made production to be fulfilled under one roof.

●2006

All machine-made soda-lime glassware products were shifted to "Fine Clear", an innovative soda-lime material exclusively developed by TSG. "Fine Clear" provides superior clarity and transparency while offering strength that is comparable to conventional soda-lime composition.

●2008

TSG made the debut of Ion Strong®, the world's first full-surface crystal glass ion toughening technology. Ion Strong® brings additional strength and elegance to Fine Crystal®. International Patent Application No. PCT/JP2007/058425.

●2014

"Edo Glass" was registered as Traditional Craft by Minister of Economy, Trade and Industry in Japan.

●2017

TSG celebrated 50th anniversary of HS toughened glassware product series, Japan's first and most successful commercialized glass-edge toughened glassware brand from 1967. TSG has sold more than 800 million pieces of HS glassware for 50 years since 1967. Fino Stackable Tumblers were awarded Good Design Gold Award 2017 and also selected as Good Design Best 100.

 Description

Icons used in the Catalog

Hand-made Each hand-crafted glassware may slightly vary in shape, size, and, color which gives each product a uniquely distinctive artistic flavor

Fine Crystal® Non-lead crystal glassware that carries added strength and elegance. Refer P4 for the details.

Lead Crystal 24% PbO Premium crystal glassware that contains 24% or more of lead oxide

Semi Lead Crystal Silicate glass containing more than 10 per cent but less than 24 per cent of lead oxide. Alternatively, silicate glass which contains lead oxide less than 24 per cent or the sum of lead oxide, zinc oxide, barium oxide and potassium oxide is more than 10 per cent

Crystal Glass Crystal glassware that contains zinc oxide, barium oxide, lead oxide and potassium oxide; one of these oxides or the sum of all the oxides have to be 10% or more

Borosilicate Glass Glassware made of borosilicate glass offers great thermal resistance and supreme quality

Designed for Hot Drinks The heatproof temperature available for each product may vary. Please refer to the product notice for details. Heatproof performance will significantly be reduced on damaged glassware. Stop using glassware with scratches or other damages for hot drinks.

Fine Crystal® Ion Strong® Toughened version of Fine Crystal® glassware exclusively developed by TSG

HS Platinum Premium grade HS glassware (Full Surface Ion Toughening)

HS Platinum Premium grade HS glassware (Glass-Edge Ion Toughening)

HS Gold High grade HS glassware (Glass-Edge Physical Toughening)

HS Blue Standard HS glassware (Glass-Edge Physical Toughening)

CC Finish CC (Cold Cutting) Sheer Rim Finishing

Stackable Self-stackable glassware

G Mark Good Design Award prizewinner

A brand-new, innovative form of Crystalline Fine Crystal®

Fine Crystal® is a new, state-of-the-art crystal glass material. Its lead-free composition is environmentally-safe, and it provides excellent alkali-resistance and anti-scratch results. Fine Crystal® offers the same brightness and clarity that is comparable to traditional 24% lead crystal. TSG has acquired industrial patents in Japan for Fine Crystal®, and has submitted patent applications internationally. With superb strength and elegance, Fine Crystal® provides the next-generation high-grade glassware perfect for quality-conscious consumers and foodservice establishments.

○ Superior resistance to residential and commercial dishwashers

TSG's Fine Crystal® is non-lead and offers superior resistance against alkaline cleaning agents. Our lab test result shows that Fine Crystal® glassware endures at least 4,500 cycles of commercial dishwashing without surface bleaching (clouding out).

DISHWASHER SAFE

Fine Crystal®

24% Lead Crystal

○ Eco-friendliness

Fine Crystal® does not contain lead, that may cause environmental and safety concerns.

○ Compliance to GMAJ and EU definitions of crystal glass

TSG's Fine Crystal® meets Manufacturers' Association of Japan (GMAJ) and EU definitions of Crystal Glass - Crystalline. The acoustic and brightness properties are equivalent to conventional crystal and semi-crystal composition.

Safe Dishwashing Tips

Fine Crystal® glassware are designed to be dishwasher safe. The followings are some of the tips that will bring safety and long service life to your beloved glassware.

- Chipped and scratched glassware are prone to breakage by physical and thermal shock. Do not wash these items with dishwashers.
- Do not expose the glassware to thermal shock (i.e. extreme temperature change.)
- After wash, wait until the glassware to return to room temperature before use.

〈For Commercial Dishwashers〉

- Always choose the rack with the right size.

〈For Household Dishwashers〉

- Do not wash or dry the glassware with high temperature course.
- Load the glassware properly. Refer to the operation manual for correct settings.

TSG Fine Crystal® series can be recognized by the laser signature printed at the bottom of each stemware.

Ion Strong® is an innovative chemical toughening technology exclusively developed by Toyo-Sasaki Glass which adds approximately **1.5 times*** strength to standard TSG Fine Crystal®.

(※in-house lab comparison test)

TSG's non-lead, alkali-resistant Fine Crystal® material offers world-class brightness and clarity and provided additional strength compared to 24% lead crystal. TSG further leads the world in glass processing technology by commercializing Ion Strong® chemical treatment which offers unprecedented anti-scratch durability and longevity.

Ion Strong® means exceptional Strength, Elegance, and Value

ION STRONG® chemical toughening is applied to the entire stemware which offers durability protection to all surfaces including rim, bowl, stem and foot.

- Unlike full-surface physical toughening, Ion Strong® will not be subjected to abrupt shattering when breakage occurs.

Superb Transparency — High-grade Soda-lime Glassware

FINE CLEAR

“Fine Clear” is the brand name of high-grade soda-lime glass material developed by Toyo-Sasaki Glass. In addition to its strength, Fine Clear achieves supreme clarity and brightness comparable to crystal glass which makes it an ideal material for glass tableware.

All TSG’s machine-made production has now been completely shifted to Fine Clear to reflect TSG’s relentless pursuit of product excellence.

TSG Glass Technology Concept

Carefully selected raw material and state-of-the-art glass melting technology are applied to minimize iron ion (Fe^{2+}) content. Iron ion is known to have a negative effect to the color hue of the glass.

Relationship between different glass materials and coloration/clarity

Increased Colorlessness and Clarity ↑	Type of Glass Material	Permeability	Transparency	Excitation Purity	Coloration	Fe^{2+} (ppm)	Content of Impurities
	TSG Lead Crystal 24% PbO	90.7	very high	0.06	Minimal	5~8	Less
	Fine Clear	90.7	↑	0.07	↑	12~24	↑
	Former TSG Soda-lime glass	89.6	↑	0.26	↑	25~30	↑
	General Window Glass	87.1	high	0.66	Light	220	More

3 types for wide range of needs

 HS Platinum	 HS Gold	 HS Blue
 "Tough" & "Scratch Resistant" Advanced HS version suitable for thinner products	 High-quality lineups that produce a wide range of food scenes Cold cut processing with no ring around the glass-edge	 Standard toughened glasses with classics such as drinking tumblers.

High Durability

Toughness Supported by Excellent Technology

 HS Full Surface Ion Toughening	Type	  HS Glass-Edge Physical Toughening
It is a method of toughening by generating compressive stress on the entire surface of the glass by chemical treatment.	Method	The toughening is applied to the glass edge portion only and is done by heating and rapid cooling to the glass surface creating a compressive stress.
 Durability can be greatly improved by applying ion toughening processing to thin glasses with various shapes of tumblers or stemwear. Full Surface Ion Toughening	Durability	 The tempered layer (compressive stress layer) is approx. 0.3mm thicker than that of conventional ion toughening, which protects the applied area from scratches for a prolonged period of time. Glass-Edge Physical Toughening

High Durability

Advanced HS Full Surface Ion Toughening

Practical test in a restaurant for 2 years of use

with
HS full surface
Ion Toughening

without
HS full surface
Ion Toughening

1.6 times as strong as no-toughened glassware!

Note: from the results of the industry standardized steel ball drop test (JIS S2043:2001) compared to our company product of item no. B-21108CS

Excellent scratch resistance!

= Practical test in a restaurant =
HS full surface ion toughening has fewer scratches than
without ion toughening.

Safety Focused

Safety Focused in Case of Breakage

Both HS Ion Toughened glassware and conventional HS Glass-Edge Physical Toughened glassware break like normal glassware. They will not be subjected to abrupt, violent shattering that might occur to full surface physical toughened glassware.

 Breakage of HS Ion Toughened glassware & HS Glass-Edge Physical Toughened glassware

Breakage of Full Surface Physical Toughened glassware

*TSG does not carry full surface physical toughened glass products.

GLASS COLUMN

About TSG’s Fruit Liquor Jar

●Functional & Convenient Points!!

- This glass bottle is not heat-resistant product. No hot water sterilization & boiling sterilization. Sudden temperature changes (quench or sudden heat) may cause breakage. Do not pour cold drink into heated glassware. Do not put glassware in wet place.
- Wash the glass bottle with soft sponge with warm water, and dry it completely with clean towel before use. Do not use hot water sterilization & boiling sterilization. Wipe the inner side of the glass bottle up with white liquor or food use alcohol.
- Do not use sponge with hard surface scourer, nylon scourer, metallic scourer, cleanser, etc on glass bottle. Scratched glass bottle may cause unexpected breakage.
- Do not use hot water sterilization & boiling sterilization on plastic parts (Outer cover, inner cover and handle) to avoid deformation.

A photograph of three pieces of clear glassware filled with a golden liquid and ice cubes. On the left is a tall tumbler glass, in the center is a lowball glass, and on the right is a pitcher. They are all sitting on a dark, textured surface, possibly a slate coaster. The background is a bright, out-of-focus window.

江戸硝子
金玻璃

The product with "Mark of Tradition" (quality certification label) is the Traditional crafts product officially designated by the Minister of Economy, Trade, and Industry, that has passed the standard of TOBU Glass Industry Co-operative Association of Japan.

The image displays three glass cups and a wooden box for the 'Golden Bubbles' collection. The cups are made of clear glass with a wide, textured band of golden bubbles around the middle. From left to right, the cups are: a small tumbler, a tall tumbler, and a wider, shorter tumbler. To the right is a light-colored wooden box with a vertical label on its side that reads 'Golden Bubbles' in Chinese characters.

Traditional Craft Products•Edo Glass

All processes of our handmade production are following the law contributes to the succession of traditional skills and techniques to the next generation, as well as to the economic development and creation of employment in the region, through the promotion of traditional craft industries.

◆About Edo Glass

Edo Glass, is a traditional glass craftwork unique to Tokyo whose origins date back to the Edo Period (“Edo” is the old name of the present “Tokyo”). "Edo Glass" craftsman rolls round up the melting glass with the blow-pipe from the high temperature glass pot, blowing air into the glass to form a designed shape, making every piece of “Edo Glass” skillfully and delicately. The technology has been handed over from generation to generation in this area without any interruption.

In the second half of Edo period, various kinds of domestic glassware were made. A state-operated factory in Shinagawa (Shinagawa Glass Factory) started inviting and hiring glassware craftsmen from overseas at the beginning of Meiji period and the new-style glass manufacturing technology was introduced at the same time. Because of the fact, Tokyo became the center of Japan’s modern glassware industry. Even in Taisho and Showa periods, there was a remarkable development on glassware production and Japan-made excellent products were exported to Europe and America. Edo Glass craftsmen have preserved this traditional handwork since Edo period, and even now, the technique of the handmade glassware is vividly alive and performed in the Tokyo area. “Edo Glass” was officially got certified as Traditional Crafts of Tokyo by Governor of Tokyo in December 2002 and also recognized as Japan Traditional Craft Products by Minister of Economy, Trade and Industry in Japan in November 2014.

Edo Glass Benihari

◆Traditional Craftmasters(Certified by Minister of Economy, Trade and Industry)

Every craftmaster is required to meet the following conditions to get certified as “Traditional Craftmaster” by Minister of Economy, Trade and Industry at least 15 years of experience in one of the designated regional heritage crafts of Greater Tokyo and much be in active practice of the craft.

◆Traditional Craftmasters(Certified by Governor of Tokyo Metropolitan Government)

Every craftmaster is required to meet the following conditions to get certified as “Traditional Craftmaster” by Minister of Economy, Trade and Industry at least 15 years of experience in one of the designated regional heritage crafts of Greater Tokyo and much be in active practice of the craft.

■ TSG's Glass Material Technologies

● "Fine Clear" (High-grade Soda-lime Glass)

"Fine Clear" is the new generation soda-lime glass material developed by TSG. Hard, light, and ultra-smooth, "Fine Clear" achieves clarity and brightness that are comparable to crystal glass, yet offering the same strength and durability just like traditional soda-lime glassware. "Fine Clear" does not contain any chemical that might be hazardous to humans. "Fine Clear" and its toughened version (HS series) have become the mainstream choice for consumers and the foodservice sector in Japan for over 45 years.

● Fine Crystal®

Fine Crystal® is an environmental-friendly, innovative lead-free crystal glass material. It also offers superior resistance against alkaline cleaning agents, which makes it suitable for residential and commercial dishwasher use. Fine Crystal® does not contain lead which may cause environmental and safety concerns. TSG's Fine Crystal® meets Manufacturers' Association of Japan and EU definitions of Crystal Glass - Crystalline (see below).

Name	Metal Oxide Content	Refractive Index (nD)	Density (g/cm ³)
Crystal Glass - Crystalline	silicate glass containing zinc oxide, barium oxide, lead oxide and potassium oxide; one of these oxides or the sum of all the oxides have to be 10% or more.	1.520 or above	2.45 or above

■ Lead Crystal 24% PbO

Lead Crystal 24% PbO is crystal glass that contains 24% or more of lead oxide, meeting the Japan definition of crystal glass (see previous page). It has a heavyweight property and offers a high refractive rate to give high clarity and brightness. Lead Crystal 24% PbO is mainly used for premium glassware and is especially suitable for fine-cutting. Special care is needed for handling lead crystal glassware due to its soft and scratch-prone characteristics.

■ Semi-Lead Crystal

Silicate glass containing more than 10% but less than 24% of lead oxide. Alternatively, silicate glass which contains lead oxide less than 24% or the sum of lead oxide, zinc oxide, barium oxide and potassium oxide is more than 10%. Semi-Lead Crystal gives superb clarity and transparency while carrying the strength and lightweightness of soda-lime glass. Semi-Lead Crystal is available at TSG's handcraft production facility and is geared toward high-grade foodservice/household tableware market.

■ Borosilicate Glass

Glassware made of borosilicate glass offers strong thermal resistance compared with soda-lime and crystal glassware. TSG's exclusive borosilicate formula gives supreme quality and can be found at TSG's o'yuwari (hot water shōchū mix) series. The heatproof temperature available for each product may vary. Please refer to the product notice for details.

GLASS COLUMN

How TSG Glassware are made

TSG places quality control in its utmost priority and offers glassware of unparalleled reliability to customers around the world.

Hand-made Glassware

History, craftsmanship, and passion.

Machine-made Glassware

State-of-the-art automotive speed and quality.

Choosing The Right Glass

High Alcohol Content / Hard Liquor	Carbonated / Sparkling Drinks	Alcohol with a featured aroma and taste
A glass with a smaller size is recommended to allow the alcohol to be sipped gradually.	A tall, narrower stemware is preferred which enables the bubbles to travel mildly and aesthetically. An exception is beer, which is normally served with large glass such as beer mug.	For alcohol with a distinctive aroma such as brandy and wine, a rounder bowl and a slightly-narrowed mouth is desired which allows the flavor to keep longer in the glass.

Major Glass Shapes and Uses

■ Liqueur Glass

The small shape is designed for the appreciation of the taste of straight liqueurs. Also used for apéritifs and sakés.

■ Sherry Glass

Sherry is a Spanish fortified wine that is blended with brandy. Typical ABV: 16%-20%. Small stemware of around 75ml is a major choice.

■ **Cocktail Glass**

For various cocktail drinks. A standard cocktail glass has a cone-shaped bowl and contains 90ml. Many adventurous designs and sizes are also available to accommodate the ever-expanding cocktail repertoire.

Collins Glass

Tall, cylindrical in shape and with a narrow mouth, a collins glass keeps the sparklings longer and is commonly used for soda drinks, sparkling wines, and cocktails.

■ Champagne Saucer

Shallow, broad-bowled champagne saucer is commonly used at parties and wedding receptions. It can be also used for soft drinks and certain cocktails.

■ Champagne Flute

Champagne flutes are characterized by a long stem with a tall, narrow bowl on top. The narrow design allows the bubbles to travel aesthetically, giving a pleasant visual appeal.

■ Wine Glass

Various shapes are available to complement different genres of wine. Generally speaking red wine goes well with larger glasses and white wine goes well with a smaller size.

■ Old Fashioned (Rocks Glass)

A short cylindrical tumbler used for serving whisky and other short-drinks with ice cubes ("on the rocks").

■ Brandy Glass

The large tulip-shaped glass with a slightly-narrowed mouth is designed to keep the aroma of the spirit. Serving volume is 30ml for maximum enjoyment.

■ Goblet

A medium-large stemmed glass mainly for serving water. A typical goblet has a volume between 240ml and 360ml. Sometimes used for serving beer and juice as well.

■ **Mug**

Large beer mug, as its name suggests, is traditionally used for serving beer. Smaller glass mug is used for coffee, tea, and is perfect for shōchū as well.

■ **Tumblr**

The most common form of glass drinkware, tumblers can be used for all genres of beverages. Wide size ranges from 180ml to over 300ml.

■ White Wine Glass

White Wine is generally served cold. Compared with red wine glass, white wine glass is usually smaller. This allows the wine to be chilled longer, to remain its clean flavor, and to keep the wine aroma from escaping.

RN-11236CS	RN-12236CS	RN-13256CS	

■ Red Wine Glass

Red Wine is very diverse and the characteristics of each type of red wine is subtly different. For red wines with a complex taste and aroma, wine glasses with a bigger bowl are used in order to bring out the aroma.

■ Bordeaux Glass

Glasses with a tall and broad bowl are usually chosen to bring out the rich, tannic, and dense aroma of Bordeaux wine, the prestigious aged wine originated from the French region of the same name.

RN-12283CS	RN-13283CS	RN-14283CS

■ Burgundy Glass

This glass style is designed to bring out the supple and elegant taste of Burgundy wine. Like Bordeaux, this region-specific, aged French wine has a high prestige. The wide, broad shape is designed to accumulate the fruity aroma in the bowl and accentuate the scent and tartness of the wine.

■ Tasting Glass

A tasting glass is used for tasting wine, whisky, and brandy. The ISO (International Organization for Standardization) has a specific standard (ISO 3591) for wine-tasting glass, which contains specific guidelines over its shape, size, and lead content.

Sake Classification

The Liquor Tax Law of Japan divides alcoholic beverages into three general classes. Sake is classified as a brewed beverage.

The law also specifies that rice, rice kōji, and filtration must be included during the manufacturing process. The definition of sake is shown in the table to the right.

In addition, the Quality Labeling Standard for Sake Brewing categorizes eight names for specific varieties of sake, which are distinguished by the degree to which the rice is polished and the added percentage of brewer's alcohol or the absence of such additives.

Brewed	Sake, Beer, Wine
Distilled	Shōchū/Awamori, Whisky, Brandy, Volka, Gin, Rum
Hybrid	Vermouth, Liqueur, Mirin, Synthetic, Sake
Sake	An alcoholic beverage made from rice, rice kōji and water using fermentation and filtration processes; or, an alcoholic beverage made from rice, rice kōji, water, sake residue, and ingredients specified by other ordinances using fermentation and filtration processes.
Eight Special Designation Sakes	Ginjō, Daiginjō, Junmai Ginjō, Junmai Daiginjō Junmai, Tokubetsu Junmai Honjōzō, Tokubetsu Honjōzō

Fragrance and Taste

The varieties of rice, water, and yeast, the climate and regional accent of the brewers, and the different ways of production processes have made sake extremely diverse and versatile. Based on its fragrance and taste, sake can be divided into four general categories.

Flavorful	- gorgeous and with a fruity, floral transparency - medium roundness and sweetness
Light	- gentle and reticent aroma - clean and with a pleasant cooling sensation
Rich	- subtle woody or lactic savoriness - full-bodied flavor with a combination of sweetness, sourness, and delightful bitterness
Aged	- strong, complex spice and dried fruit flavor - balanced and refined acidic, sweet flavor

Various ways to enjoy sake

Shokuzenshu (Aperitif, or pre-dinner sake)

Introduced before a meal to stimulate the appetite and to serve as a lip moisturizer. Low-alcoholic sake with a clean texture is a common choice.

Shokuchūshu (Sake during meal)

Sake that can enhance the meal experience and brings a pleasant flavor is recommended. Ginjō, which has a light, sharp texture, is a common choice.

Shokugoshu (Digestif, or after dinner sake)

Sake that delivers an after-meal-fulfilling and fruity aroma is preferred. Sake such as Daiginjō and Jukusei Daiginjō give a superior flavor that are usually served to prolong the dinner experience's aftertaste, are common choices.

Yawaragi Mizu

Yawaragi mizu is the Japanese word for the water to drink between sake shots, to act as a "chaser". There is no specific recommendation or rule on what type of water that should be consumed, but some brewers market the source water of their sake and there are several brands of water that are exclusively tailored for yawaragi mizu.

Tips on Washing Glassware with Commercial Dishwashers

1 Remove heavy dirty spots from the glassware surface before operation

Since commercial dishwasher soap is often designed for repeated use, heavy food spots will pollute and thus reduce the power of the soap. Heavy and dirty spots may remain on the glassware after completing the rinsing with alkaline dishwasher soap.

3 Rinse the glassware thoroughly

In order to rinse off the alkaline residue of the dishwasher soap, it is recommended to set a longer rinsing time for glassware than other types of tableware. In particular, stemware and glassware with decorative patterns are easier for soap residue to stay, compared with simpler items such as straight tumblers.

2 Choose the right washing rack

Having rack compartments that are too small might block the wash flow thus allow dirty spots to be remained on the glassware, while having compartments that are too large might allow the glass to fall and break. Always use racks with the right compartment size.

4 Use rinse agent

Use rinse agent to help dissolving the rinsing water from the glass surface. Minerals and soap residue in the rinsing water may form milky stains on the glass surface after drying. The bottom of the glass is usually where extra water is being accumulated. Use a towel to wipe it off or hold the glassware to spin the water off before drying.

5 Cool down the glassware before another use

Do not use the glassware while it is still warm after wash. Abrupt temperature change (esp. going from high to low temperature, such as adding ice to a warm glass) might cause the glass to break. Wait until the glassware to reach back the room temperature.

6 Use only clean towels to rub your glassware

Dirty towels must be washed and replaced with clean ones regularly. Soiled towels that are simply dried out and reused might have their dirt spread to the cleaned glassware.

7 Perform proper maintenance regularly

Clogged detergent/water nozzles and other malfunctions might prevent the dishwasher from its full washing power.

Glassware Printing and After Processing

Screen Printing

TSG offers advanced screen printing services for multi-color graphics and designs on the glass. In additional to the standard printed glassware collection in our catalog, screen printing is also available for publishing your company logos, names and graphics which turns TSG glassware into excellent advertising media for your business. Standard ceramic inks, semi-transparent inks, and crystal ice textured inks are available to serve your needs.

Sandblasting

Frosted designs are created by high pressure sandblasting equipment. Sandblasting is a process in which fine silicate particles are blown onto the glass surface to produce the graphics desired.

Cut Glass Processing

Beautiful cut patterns are engraved by fast-spinning diamond wheels using original cutting technologies developed by TSG.

Laser Marking

State-of-the-art laser marking devices are employed to imprint letters or graphics onto/into the glass.

Cased Glass

TSG glassware are not painted but **pure melt** (one color) or **cased** (two or more layers). In case of two-layer cased glasses, one side will be transparent, the other side colored. **Outer casing** (where the outer layer is colored) and **inner casing** (where the inner layer is colored) employ different forming processes. Combined with various cutting patterns and techniques, casing opens up a wide range of beautiful and artistic design possibilities and is a distinctive feature of Japanese Kiriko glass.

Outer casing
(Cross section view)

The Yachiyo Kiriko series is a perfect example of a two-layered cased glass.

TSG's custom order vases that employ **three-layer casing** techniques.
